

Dear Stakeholder,

The [Massachusetts Clean Energy Center](#) (MassCEC) and the [Department of Energy Resources](#) (DOER) are seeking proposals from Massachusetts cities and towns interested in participating in the 2019 [HeatSmart Massachusetts Program](#).

HeatSmart Mass is a community-based outreach and education program that will encourage the adoption of clean heating and cooling technologies, including air-source heat pumps, ground-source heat pumps, modern wood heat, and solar hot water. The Program aims to help drive down the installation cost and increase deployment of residential and small-scale commercial clean heating and cooling installations through a group purchasing model. HeatSmart Mass is modeled on the highly successful Solarize Massachusetts program, which is now in its eighth year. It has served 64 communities, resulted in over 3,300 contracts and added 22.3 megawatts of solar photovoltaic projects.

Through this RFP, MassCEC and DOER will select up to six (6) communities (or groups of communities) to participate in the HeatSmart Massachusetts Program. Communities with a clear and comprehensive outreach plan, a committed volunteer team, an engaged municipality, and residents interested in participating are encouraged to apply.

Click [here](#) to access the Community RFP documents, which are located under the “How Do I Apply?” tab.

MassCEC will host a [webinar](#) on August 1st to provide an overview of the eligible heating technologies and answer questions.

All proposals are due by 11:59 p.m. on September 16, 2018.

Please note that MassCEC will also be posting a Request for Proposals for a 2019 HeatSmart Mass Technical Consultant in the coming weeks.

All inquiries related to HeatSmart Mass should be submitted by email to HeatSmartMass@masscec.com.

Thank you for your continued interest in MassCEC!
The HeatSmart Mass Team
